# FORTIFY YOUR GPU

A New Type Of Reinforcement

Tempered glass, addressable RGB, and edge-lighting technology all crammed into a not-so-simple graphics card support bracket. Sure, GPU brackets are an important tool in keeping your motherboard's PCI-e slot safe from sag but we bet you didn't expect it to be the new centerpiece to your build.

The **MasterAccessory ARGB GPU Support Bracket** utilizes the strength and aesthetic of tempered glass in completely new ways. The strength of the TG supports the biggest, baddest cards out there. The CNC machining provides edge-lit ARGB. The universal design of the support arm offers hassle-free adjustment, by sliding and locking in place, to fit a high range of graphics card and PC case combinations. If your build is on the subtler side, switch off the lighting for an elegant, invisible GPU support bracket.

Equal parts functional and artistic, the MasterAccessory ARGB GPU Support Bracket keeps your PCI-e slots safe as effectively as it keeps you staring at your glorious build for way too long.

FEATURES

Eliminate Graphics Card Sag – As graphics cards become larger and heavier, PCI-e slots suffer from increased stress and weight. The MasterAccessory ARGB GPU Support Bracket eliminates this by supporting the GPU's weight-critical points.

Edge-Lit ARGB Tempered Glass – CNC machining on the tempered glass creates rails for ARGB lighting to travel throughout the bracket. The lighting can also be turned off for a near-invisible aesthetic.

Easy To Install – With its 100% tool-less design and straightforward adjustment of the support, installation is painless. The solid base is reinforced by a strong magnet to secure it in place.

Multiple Orientations – Includes two supports with different orientations for you to either place it at the tail-end of the GPU, or on the side of the GPU closest to the side panel.

Protect Your Components – Relieve the stress on your motherboard's PCI-e slot and protect your card while moving. Thorough strength testing shows that the glass can withstand the heaviest of cards without flinching.

Versatile Support - The universal design of the support arm offers hassle-free adjustment, by sliding and locking in place, to fit a high range of graphics card and PC case combinations.

SPECIFICATIONS

Product Name		ARGB GPU Support Bracket
Product Number		MCA-U000R-GSBTG-00
Available Color		Black
Materials	Exterior	ABS Plastic, Tempered Glass
Dimensions (L x W x H)	Incl. Protrusions	58 x 58 x 177mm/2.29 x 2.29 x 6.97inch
ARGB Cable length		510mm/20.1inch
Included GPU supports		2
ARGB Controller		Not Included
Net weight		0.14 kg/ pcs
Gross weight		0.22 kg/ pcs
Warranty		2 Years
